Word Count : 200

The modes of transport used by residents to commute to work in a specific UK city from the year 2000 to 2020 is shown in the table .

Overall, it can be seen that cars were the most popular means of transport than other modes of transport from 2000 to 2020. However, walking accounted for lowest percentage .

To begin with, the year 2000 and 2010 . mode of transport by car accounted highest percentage in 2000 at 65 percent , which was highest among all the other mode of transport. But, in the year 2010 it dropped by 5 percent. following that was bus which was second most popular mode of transport in both years at 15 percent. However, walking represented the least favorable means of transport in 2000 at 5 percent and at 7 percent in 2010.

Moreover, In the year 2020 . Car was still most used mode of transport at 45 percent , but it was 5 percent less than 2010.

following that was Train second most used means of transport at 22 percent . although, number of people using walking to commute to their work was more than previous data , still it was the lowest at just 9 percent.

Task 2 – Digital Money Transfer Essay

Candidate Name : priyansh patel

Roll / ID : 199/26

Submitted : 12/09/2026, 14:14:16

Word Count : 356

In recent time internet and smartphones have become an important part of your life. Today many people use smartphones and internet to make online payment to their relatives, friends and businesses. I think this is a positive development as now a person can easily transfer money to another person in a tough situation and it has made business processes faster, moreover it has also made the entire system of transaction cashless.

First of all, online payment has made business processes quicker than ever before. To explain in few words first business owner had to face some loss due to late payment like work force stop working, not able to pay dues to other business which might hamper trust and many more. But, that is not the case right now due to online money payment. As there are automatic systems in smartphones that can handle payment for business on its own and can send alerts for late payment. In addition to that, online transfer of money can help during tough times. It means smartphones and internet can be very helpful during the time when someone wants to make payment in an emergency situation. Like someone in family wants some money because of some financial loss, medical situation and many more in that case online payment can be very useful.

However there are drawbacks to this. First drawback is online fraud. With increase in number of online payment users cybercrime is also increasing, due to which many people lose their entire life saving or money that save for some special event. Moreover, online payment has created the problem of impulse buying. In short it means transfer money using mobile and internet has made people addicted to it. In this problem individuals spend money on the things they or she may not even want.

At last I would say online payment can help during the time of need and has made business process more fast. But there is a problem of online fraud. Which again can be dealt with social awareness and impulse buying which is a psychological problem doctors can give more solution to treat it.
